Enunciados

Capitulo 1: Física de particulas y relatividad especial

1. A quantum fi eld

- (a) Is a fi eld with quanta that are operators
- (b) Is a fi eld parameterized by the position operator
- © Commutes with the Hamiltonian
- (d) Is an operator that can create or destroy particles

2. The particle generations

- (a) Are in some sense duplicates of each other, with each generation having increasing mass
- (b) Occur in pairs of three particles each
- © Have varying electrical charge but the same mass
- (d) Consists of three leptons and three quarks each

3. In relativistic situations

- (a) Particle number and type is not fi xed
- (b) Particle number is fi xed, but particle types are not
- © Particle number can vary, but new particle types cannot appear
- (d) Particle number and types are fi xed

4. In quantum fi eld theory

- (a) Time is promoted to an operator
- (b) Time and momentum satisfy a commutation relation
- © Position is demoted from being an operator
- (d) Position and momentum continue to satisfy the canonical commutation relation

5. Leptons experience

- (a) The strong force, but not the weak force
- (b) The weak force and electromagnetism
- © The weak force only

• (d) The weak force and the strong force

6. The number of force-carrying particles is

- (a) Equivalent to the number of generators for the fi elds gauge group
- (b) Random
- © Proportional to the number of fundamental matter particles involved in the interaction
- (d) Proportional to the number of generators minus one

7. The gauge group of the strong force is:

- (a) SU(2)
- (b) U(1)
- © SU(3)
- (d) SU(1)

8. Antineutrinos

- (a) Have charge -1 and lepton number 0
- (b) Have lepton number +1 and charge 0
- © Have lepton number -1 and charge 0
- (d) Are identical to neutrinos, since they carry no charge

Capitulo 2: Teoría de campos lagrangiana

1. Find the equation of motion for a forced harmonic oscillator with Lagrangian

$$L=rac{1}{2}m\dot{x}^2-rac{1}{2}m\omega^2x^2+lpha x$$

Here α is a constant

2. Consider a Lagrangian given by

$${\cal L} = -rac{1}{2}\partial_{\mu}arphi\partial^{\mu}arphi - rac{1}{2}m^{2}arphi^{2} - V(arphi)$$

- (a) Write down the fi eld equations for this system.
- (b) Find the canonical momentum density π ().x
- © Write down the Hamiltonian.

- 3. Consider a free scalar fi eld with Lagrangian L= $\partial \partial \mu \mu \phi \phi$ and suppose that the fi eld varies according to $\phi \phi \alpha \rightarrow +$, where α is a constant. Determine the conserved current.
- 4. Refer to the Lagrangian for a complex scalar fi eld Eq. (2.37). Determine the equations of motion obeyed by the fi elds φ and φ †.
- 5. Refer to Eq. (2.37) and calculate the conserved charge.
- 6. Consider the action SFFdx= $\int 144\mu\nu\mu\nu$. Vary the potential according to AA $\mu\mu\mu\phi\rightarrow +\partial$ where ϕ is a scalar field. Determine the variation in the action.

Capitulo 3: Una Introducción a la teoría de grupos

- 1. Consider an element of SU(2) given by Ueix= $\sigma\alpha/2$. By writing down the power series expansion, write Uin terms of trigonometry functions.
- 2. Consider SU(3) and calculate trij().λλ
- 3. How many casimir operators are there for SU(2)?
- 4. Write down the casimir operators for SU(2). A Lorentz transformation can be described by boost matrices with rapidity defined by $tanh/.\phi=vc$ A boost in the x direction is represented by the matrix
- 5. Find the generator Kx

- 6. Knowing that [,]KKiJxyz=-, where Jzis the angular momentum operator written in four dimensions as find Ky.
- 7. Do pure Lorentz boosts constitute a group?

Capitulo 4: Simetrías discretas y números cuánticos

- 1. Angular momentum states transform under the parity operator as
 - (a) PLmLmzz,=-
 - (b) PLmLLmzz,=
 - © PLmLmzLz,=-()1
 - (d) PLmLmzz,=
- 2. The interaction Lagrangian of electromagnetism is invariant under charge conjugation if
 - (a) CA CAμμ==-1
 - (b) It is not invariant under charge conjugation
 - © CJ CJμμ-=1
 - (d) CA CAμμ-=1

3. Parity is

- (a) Conserved in weak and electromagnetic interactions, but is violated in the strong interaction
- (b) Conserved in strong interactions, but is violated in weak and electromagnetic interactions
- © Not conserved
- (d) Conserved in the strong and electromagnetic interactions, but is violated in the weak interaction
- 4. The eigenvalues of charge conjugation are
 - (a) $c=\pm 1$
 - (b) $c=\pm 01$,
 - © cq=±
 - (d) $cq = \pm 0$,

Capitulo 5: La ecuación de Dirac

Quiz

1. Find the equation of motion for a forced harmonic oscillator with Lagrangian

$$L = \frac{1}{2}m\dot{x}^2 - \frac{1}{2}m\omega^2x^2 + \alpha x$$

Here α is a constant.

48

Quantum Field Theory Demystified

2. Consider a Lagrangian given by

$$\mathcal{L} = -\frac{1}{2}\partial_{\mu}\varphi \partial^{\mu}\varphi - \frac{1}{2}m^{2}\varphi^{2} - V(\varphi)$$

- (a) Write down the field equations for this system.
- (b) Find the canonical momentum density $\pi(x)$.
- (c) Write down the Hamiltonian.
- 3. Consider a free scalar field with Lagrangian $\mathcal{L} = \partial_{\mu} \varphi \partial^{\mu} \varphi$ and suppose that the field varies according to $\varphi \to \varphi + \alpha$, where α is a constant. Determine the conserved current.
- 4. Refer to the Lagrangian for a complex scalar field Eq. (2.37). Determine the equations of motion obeyed by the fields φ and φ^{\dagger} .
- 5. Refer to Eq. (2.37) and calculate the conserved charge.
- 6. Consider the action $S = \frac{1}{4} \int F_{\mu\nu} F^{\mu\nu} d^4x$. Vary the potential according to $A_{\mu} \to A_{\mu} + \partial_{\mu} \varphi$ where φ is a scalar field. Determine the variation in the action.
- 1. Given the LagrangianL= ∂ - $\psi\gamma\psi\mu\mu$ ()[]xim vary ψ ()xto find the equation of motion obeyed by ψ ()x.
- 2. Calculate {, }.γγμ5

- 3. Consider the solution of the Dirac equation with $Ek = > \omega 0$. Find a relationship between the uand vcomponents of the Dirac fi eld.
- 4. Find the normalization of the free space solutions of the Dirac equation using the density $\psi \gamma \psi 0$.
- 5. Find S01, the generator of a boost in the xdirection.
- 6. We can introduce an electromagnetic fi eld with a vector potential A μ . Let the source charge be q. Using the substitution ppqA $\mu\mu\mu\rightarrow$ -, determine the form of the Dirac equation in the presence of an electromagnetic fi eld.

Capitulo 6: Campos escalares

- 1. Compute ^(),^()†Nk N k L [] for the real scalar fi eld.
- 2. Find ^()^() ()†Nka k nk
- 3. Find ^.N0
- 4. Consider the complex scalar fi eld. Determine if charge is conserved by examining the Heisenberg equation of motion for the charge operator ^Q. |QHQ=[], Do this computation by writing out the operators using Eqs. (6.68) and (6.70) and using the commutation relations Eq. (6.64)

Quiz

1. Given the Lagrangian

$$\mathcal{L} = \overline{\psi}(x)[i\gamma^{\mu}\partial_{\mu} - m]\psi$$

vary $\psi(x)$ to find the equation of motion obeyed by $\overline{\psi}(x)$.

- 2. Calculate $\{\gamma_5, \gamma^{\mu}\}$.
- 3. Consider the solution of the Dirac equation with $E = \omega_k > 0$. Find a relationship between the u and v components of the Dirac field.
- 4. Find the normalization of the free space solutions of the Dirac equation using the density $\bar{\psi}\gamma^0\psi$.
- 5. Find S^{01} , the generator of a boost in the x direction.
- 6. We can introduce an electromagnetic field with a vector potential A_{μ} . Let the source charge be q. Using the substitution $p_{\mu} \rightarrow p_{\mu} qA_{\mu}$, determine the form of the Dirac equation in the presence of an electromagnetic field.

Capitulo 7: Las reglas de Feynman

- 1. What is the amplitude for the process shown in Fig. 7.16?
- 2. Find the lifetime for the decay as shown in Fig. 7.17.
- 3. An internal line corresponds to a spin-0 boson of mass m. The propagator is
 - (a) iqmqm/+-22
 - (b) iqm22-
 - © iqm/-
 - (d) δ ()qm22-

4. In the interaction picture,

- (a) The time evolution of states is governed by the free Hamiltonian
- (b) States are stationary, operators evolve according to the interaction part of the Lagrangian
- © States evolve according to the interaction part of the Hamiltonian, fi elds evolve according to the free part of the Hamiltonian
- (d) States obey the Heisenberg equation of motion

- 5. Each vertex in a Feynman diagram requires the addition of
 - (a) One factor of the coupling constant –ig
 - (b) One factor of the coupling constant –g
 - © One factor of the coupling constant –ig2
 - (d) One factor of the coupling constant –ig
- 6. What number is the coupling constant for quantum electrodynamics related to?

Capitulo 8: Electrodinámica cuántica

- 1. Compute[,]DDμν.
- 2. The Lagrangian of quantum electrodynamics can be best described as(a) Admitting a local U()1symmetry(b) Admitting a global U()1 symmetry© Admitting a local SU()2symmetry(d) Admitting a local SU()1 symmetry
- 3. Write down the amplitude for electron-positron scattering as shown in Fig. 8.11.
- 4. The minimal coupling prescription for the QED Lagrangian is(a) DigAe $\mu\mu$ μ = ∂ +(b) DigAe $\mu\mu$ μ = ∂ - \mathbb{C} DiqA $\mu\mu$ μ = ∂ +(d) DiqA $\mu\mu$ μ μ 0
- 5. In a QED process an incoming antiparticle state is written as(a) vps(,)(b) ups(,)© ups(,)(d) vps(,
